Population Exposure

population per 1 sq. km from Landscan

PAGER content is automatically generated, and only considers losses due to structural damage. Limitations of input data, shaking estimates, and loss models may add uncertainty.

Structures

Overall, the population in this region resides in structures that are a mix of vulnerable and earthquake resistant construction. The predominant vulnerable building types are informal (metal, timber, GI etc.) and unreinforced brick masonry construction.

Historical Earthquakes

| Date | Dist. | Mag. | Max | Shaking |
|------------|-------|------|----------|---------|
| (UTC) | (km) | | MMI(#) | Deaths |
